

Wiki tip: to DELETE a page (kk, 24feb12)

If you make a trial page and want to delete it instead of edit it, click on “more page options” [= ...] and select “Delete” from the window that pops up:

The screenshot shows a web browser window displaying a MediaWiki page titled "home". The page content includes a welcome message, a list of two components, and copyright information. A "more page options" menu is open, showing actions such as "Rename", "Redirect", "Delete", "Lock", and "Permissions". The "Delete" option is circled in red. The browser's address bar shows the URL "apling678su10.wikispaces.umb.edu".

This will delete the page PERMANENTLY. Consider if you might want to merely edit so that the page will be available in history in case you want to go backwards and start again.
